Outerlink's All-in-One Wireless Communication System for EMS & First Responders

Wi-Fi / Tracking / Voice / In-dash Navigation / Vehicle Informatics / Push-to-Talk / & more

Outerlink's in-dash system, the **Communique 950**, provides an all-in-one wireless communication solution for your EMS & first responder fleet. You no longer need to run multiple systems to achieve reliable wireless connectivity, transmit vital data, monitor vehicle informatics, and manage operations efficiently. Know each vehicle's exact location and receive its critical status updates directly into your CAD program, so you always know who's available for the next call. With the Communique 950, you can transmit patient data securely across your tablet's ePCR program, and send 12-lead results directly to the hospital, with one device. Add accuracy to your billing mileage and utilize management tools for better resource optimization. There are no limits to what your operation can achieve, using the customizable tools within the affordable Communique 950 system.

Outerlink's hardware products are integrated with our best-in-industry web-based mapping and management software program, OuterLink Console™. Built in-house according to our customers' specifications, Console delivers a host of tools for dispatchers and operators.

Speak with a product specialist today to schedule an online product demonstration: **(978) 284-6070**. See for yourself why Outerlink, the world's leader in satellite tracking and asset management, is also the premier communications innovator in the emergency transport community.

Communique 950 system description:

- The in-dash GPS navigation system receives dispatch information and produces turn-by-turn directions without any driver interaction required
- The multi-modal Iridium & cellular transceiver provides reliable tracking in both rural and urban areas
- High-speed wireless internet via an internal Wi-Fi router (3G wireless broadband)
- On Board Diagnostics (OBD-II) & CAN-bus interface for vehicle data collection, analysis, & reporting
- Touchscreen for easy operator access
- Push-to-Talk messaging between the Communique 950 and dispatch via Outerlink's proprietary mapping & management software, Outerlink Console
- CAD integration with two-way data exchange for added efficiency and minimized redundancy

Key Features:

- GPS and GPRS
- Iridium satellite tracking module
- High-speed wireless internet
- Wi-Fi router

COMMUNIQUE 950

IN DASH TWO WAY COMMUNICATIONS DEVICE • LEARN MORE...

- Phone & SMS
- Remote navigation
- Touch screen
- Data-analysis, & reporting

What do these features deliver for your business?

- Operating cost reduction
- Fixed data/service rate – in one invoice
- Exact mileage billing
- Reduced response time
- Improved unit hour utilization
- Added value for your patients & hospital programs
- Reduced manual data inputting
- Increased transport visibility for enhanced safety
- Reduced fleet maintenance costs
- Extended vehicle lifespans

Just looking for tracking? Outerlink offers a more basic vehicle tracking device, the **Communique 4**. This data transceiver offers the same powerful multi-modal (Iridium satellite and cellular network) tracking capability as the Communique 950, but in a smaller, lightweight package. It can be installed easily and inconspicuously, anywhere in the vehicle.
